

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

compare their Observations therewith, either to verifie these *Predictions*, or to shew wherein they differ; which is (as was also hinted above) the design of this *Philosophical Prophet* in dispersing his Conceptions, who declareth himself ready, in case he be mistaken in his reckoning, to learn another *Hypothesis*, to explicate these admirable appearances by.

An Experimental History of Cold.

There is in the Press, a New *Treatise*, entituled, *New Observations and Experiments in order to an Experimental History of Cold*, begun by that Noble Philosopher, Mr. *Robert Boyle*, and in great part already Printed; He did lately very obligingly present several Copies of so much as was Printed, to the *Royal Society*, with a desire that some of the Members thereof might be engaged to peruse the Book, and select out of it for trial, the hints of such Experiments, as the *Author* there wisheth might be either yet made or prosecuted. The Heads thereof are,

1. Experiments touching Bodies capable of Freezing others.
2. Experiments and Observations touching Bodies Disposed to be Frozen.
3. Experiments touching Bodies, Indisposed to be Frozen.
4. Experiments and Observations touching the Degrees of Cold in several Bodies.
5. Experiments touching the Tendency of Cold Upwards or Downwards.
6. Experiments and Observations touching the Preservation and Destruction of (Eggs, Apples, and other) Bodies by Cold.
7. Experiments touching the Expansion of Water and Aqueous Liquors by Freezing.
8. Experiments touching the Contraction of Liquors by Cold.
9. Experiments in Confort, touching the Bubbles, from which the Levity of Ice is supposed to proceed.
10. Experiments about the Measure of the Expansion and the Contraction of Liquors by Cold.
11. Experiments touching the Expansive Force of Freezing Water.
12. Experiments touching a New way of estimating the Expansive

five force of Congelation, and of highly compressing Air without Engines.

13. Experiments and Observations touching the Sphere of Activity of Cold.

14. Experiments touching differing *Mediums*, through which Cold may be diffused.

15. Experiments and Observations touching Ice.

16. Experiments and Observations touching the duration of Ice and Snow, and the destroying of them by the Air, and several Liquors.

17. Considerations and Experiments touching the *Primum Frigidum*.

18. Experiments and Observations touching the Coldness and Temperature of the Air.

19. Of the strange Effects of Cold.

20. Experiments touching the weight of Bodies frozen and unfrozen.

21. Promiscuous Experiments and Observations concerning Cold.

This Treatise will be dispatched within a very short time, and would have been so, ere this, if the extremity of the late Frost had not stopt the Press. It will be accompanied with some Discourses of the same *Author*, concerning *New Thermometrical Experiments and Thoughts*, as also, with an Exercitation about the *Doctrine of the Antiperistasis*: In the former whereof is *first* proposed this *Paradox*, That not only our Senses, but common Weather-glasses, may mis-inform us about Cold. *Next*, there are contained in this part, New Observations about the deficiencies of Weather-glasses, together with some considerations touching the *New* or *Hermetrical* Thermometers. *Lastly*, they deliver another *Paradox*, touching the cause of the Condensation of the Air, and Ascent of water by cold in common Weather-glasses. The latter piece of this part contains an Examen of *Antiperistasis*, as it is wont to be *taught* and *proved*: Of all which there will, perhaps, a fuller account be given by the Next.
